Relocating to Charlotte, NC — September 2026

Professional Summary

Full-stack developer and Computer Science graduate who independently designed, built, and deployed a production operations platform that was subsequently acquired by the organization. Builds scalable, data-driven applications across web, mobile, and ML domains with Python, React, FastAPI, and PostgreSQL.

Technical Skills

Languages: JavaScript, Python, Java, Kotlin, SQL, Swift, TypeScript, Shell

Frameworks & Libraries: React, FastAPI, Next.js, Node.js, Tailwind CSS, Framer Motion, HTML5, CSS3

Tools & Technologies: PostgreSQL, Firebase, MySQL, Docker, Azure, Maven, Git/GitHub, REST APIs, SQLAlchemy, Selenium, Streamlit, Nginx

Methodologies: Agile, Scrum, REST API Design

Certifications: Red Hat Academy (Linux Systems), Coursera (Cybersecurity Foundations)

Projects

OVERWATCH: Operations Command Platform

Python, FastAPI, PostgreSQL, React, Selenium, Docker

- Architected and deployed a full-stack platform with FastAPI backend, PostgreSQL database with SQLAlchemy ORM, and a modular React frontend featuring 9 operational sections, JWT authentication, and multi-tenant architecture.
- Integrated four external systems (Lighthouse, eHub, GeoTab, AssetPanda) into a unified command dashboard via REST APIs and Selenium scrapers, automating incident triage and reducing daily review time by 87%.
- Deployed via Docker Compose with Nginx reverse proxy, SSL termination, systemd services, and background job scheduling for production reliability.

Meridian: Multi-Tenant Workforce Operations Platform

Python, FastAPI, PostgreSQL, Celery, Redis, Claude API

- Built a multi-tenant SaaS platform across three surfaces (FastAPI backend, Next.js operations dashboard, React Native mobile app), with per-tenant data isolation, subdomains, and plan tiers across roughly 22 domain entities.
- Engineered an autonomous SMS dispatch pipeline using an LLM intent classifier with a safety-first fallback that escalates on malformed output, routing routine requests to automated responses and critical ones to human operators.
- Designed an LLM integration layer with retry and exponential backoff, rate-limit and overload handling, and per-call telemetry logging of model, prompt version, tokens, and latency for auditability and cost tracking.
- Implemented real-time event delivery via a WebSocket server with Redis pub/sub fan-out, backed by distributed Celery task workers for background processing.

AttendEase: Mobile Attendance App

Kotlin, Python, Firebase, NFC

- Built an NFC-based mobile app that automates attendance tracking across iOS and Android, reducing data entry errors by over 70% with mobile-first workflows and Firebase backend services.

Experience

Operations Manager

Dec 2024 - Present

Strategic Security Corp — Smithtown, NY

- Independently designed, built, and deployed OVERWATCH, a production operations platform now serving as the foundation of the company's operations and emergency response systems.
- Implemented RBAC with company-level data isolation, JWT authentication, bcrypt password hashing, and input validation via Pydantic to meet federal contract compliance requirements.
- Coordinated cross-agency operations during the 2025 Presidential Inauguration, directing secure logistics with DoD and federal teams in a high-pressure environment.

Operations Analyst

Dec 2022 - Dec 2024

Strategic Security Corp — Smithtown, NY

- Built KPI dashboard reports using Excel automation and internal reporting tools, enabling real-time visibility into performance metrics and faster executive decision-making.
- Analyzed staffing trends using workforce data models and scheduling tools, resulting in a 20% reduction in overtime costs and improved personnel allocation across high-demand sites.

Education

BSc. in Computer Science

Jan 2022 - May 2026

New York Institute of Technology — Key Coursework: Operating Systems, Database Management, Computer Networks
